Hey Adam

It's my understanding that they have not completed development of a final air quality modeling protocol for the I-270 project (let alone finished the actual modeling and analysis). I may have not conveyed what stage CDOT/FHWA were at when I mentioned that. So no results at this time. Sorry.

**Subject:** Denver 270 EJ Analysis

Hi Greg – I have in my notes you mentioning that the state/MPO did additional modeling and analysis for 270 because it was an EJ community, and that it was similar but less rigorous than what had been done for NEPA. Could you forward me the analysis they did? Not the modeling files, just the results/analysis.

Thank you,

Adam Clark
